**SUPPLEMENTARY INFORMATION:**

On June 10, 2015, DOE published a notice of proposed rulemaking (NOPR) and public meeting in the Federal Register that proposed new and amended energy conservation standards for residential conventional ovens. 80 FR 33030. The NOPR requested comment from the public on the proposed standards, associated analyses, and results, and provided for the written submission of comments by August 10, 2015. The Association of Home Appliance Manufacturers (AHAM) requested that DOE extend the comment period by 60 days so that manufacturers can obtain sufficient data to fully analyze DOE's proposed rule according to the conventional oven test procedure final rule that was published on July 2, 2015. 80 FR 37954. Because there are currently no performance based energy conservation standards, AHAM noted that manufacturers do not conduct regular energy tests on conventional ovens. AHAM further stated that by allowing additional time for manufacturers (and other stakeholders who wish to conduct testing) to test their products, manufacturers will be able to provide key data to support DOE's analysis.

Based on AHAM's request, DOE determines that a 30 day extension of the public comment period is appropriate to allow interested parties additional time to submit comments. DOE notes that it issued and made available a pre-publication version of the conventional oven test procedure final rule on June 9, 2015. Based on DOE's testing experience, extending the comment period by 30 days for a 90 day total period should be sufficient time for manufacturers to conduct testing using the new oven test procedure and aggregate results. DOE will consider any comments received by midnight of September 9, 2015 to be timely submitted.

Issued in Washington, DC, on July 23, 2015.
